Gary and Brian,

I looked back and we provided the sampling locations in several forms to Rafael, on several occasions. If you didn't have the locations how did you choose where to do your sampling? Did you use the VSP data for sampling location selection? If by chance you don't have the VSP data please let me know that was required for this project.

At the time input into VSP required the use of **UTM Zone 14N Nad83** (your GIS folks will know what that means).

Unfortunately I do not have CAD so I can't supply list of wells and well coordinates so I'm going to supply data in a couple different formats and with a little effort you'll be able to put a table together.

In this series of emails I'm going to supply maps of the analytical results, which will reference the lab sample number. Then I'm going to supply VSP data, which contains the lat long data for the sampling points.

After you receive the data call me if you have any questions.

Stephen:

Brian Mueller, RPM, is looking for locational information (GPS Coordinates) for samples that were taken for this project by TRC and your previous companies. He apparently did not get that

9596542

information when the information was supplied.

Please give me an update on this information.

Thanks
